

ICAM to Release CAM-POST V19 at IMTS 2010

Montreal, August 24, 2010 - ICAM Technologies Corporation (ICAM) announces that it will release *CAM-POST® V19, the latest version of its NC post-processing development software, at IMTS 2010 (Booth E-3917).

CAM-POST V19 is an interactive NC post-processing development and management software that interfaces with the most popular CAD / CAM / PLM systems, CNC controllers and machine tools.

CAM-POST V19 forms an integral part of ICAM's "Integrated PSE" suite of products that provides a unique environment for Post-processing, Simulation and Emulation inside a single software platform.

"Integrated PSE" also provides the means to compute in-process stock geometry to identify, list and display surface gouges, excess material, inaccessible areas and rapid-motion collisions at any time during the post-processing and verification phase.

Based on current NC manufacturing challenges faced by leading companies in the aerospace and automotive industries, CAM-POST V19 incorporates numerous technological enhancements and functions specifically catered to this evolving market.

Building on its advanced "forward-looking" features such as path planning and rotary axes pre-positioning / winding, developed to enhance the machining process while avoiding dwell marks, over-traveling and rotary repositioning, "Integrated PSE" V19 offers an array of new features to its end-users including:

- Mill / Turn Simulation with Material Removal
- Built-in support for Mill / Turn sub-spindle or back spindle
- Probing Simulation
- RTCP and LCS Support
- New flexible GENER & CeRun user interface layout
- Windows XP, Vista and 7 compliant installation and operation

"Version 19 of ICAM's "Integrated PSE" provides our customers with a powerful software tool allowing for post-processing and simulation with G-code verification for advanced machining applications including Mill / Turns," says Brian Francis, ICAM's Director of Research and Development. "We will be demonstrating the new features of version 19 at IMTS 2010, so drop by to take a first look!"

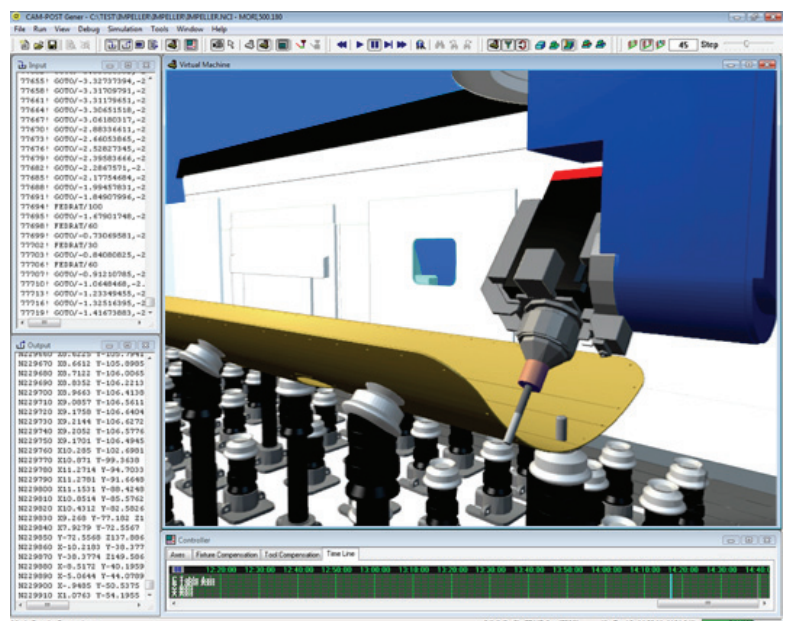

About ICAM Technologies Corporation

For over 35 years ICAM Technologies Corporation has been specializing in the development and implementation of advanced NC post-processing solutions for manufacturers in major industries around the world. ICAM has added an integrated machine tool simulator, Virtual Machine®, with the provision for Machine Code Data (MCD) verification driven with ICAM Control Emulator™ to its product mix that further strengthened its position in the NC manufacturing market. ICAM customers benefit from dramatic improvements to CNC machine optimization, NC programmer productivity and manufacturing process efficiency. ICAM's unique technology and services provide its customers and industry partners with the competitive edge that their business operations and customers demand.
